overview test results deals discussions Vacuum Type Upright/Handheld Bagless Yes Cordless No Anti-Allergy Filter (HEPA) Yes Wet Compatible No The Shark Navigator Lift-Away is an upright vacuum. It's an entry-level model within Shark's extensive lineup of 'Lift-Away' bagless uprights, which are designed to allow you to pick up and carry its canister while vacuuming with its wand. Its 'Zero-M' brushroll isn't as tangle-prone as most other brushrolls, though it'll still require cleaning every now and then. 7.5 Bare Floor 7.7 Low-Pile Carpet 7.4 High-Pile Carpet 7.3 Pets 7.4 Stairs 7.0 Cars 4.7 Workshop Updated Aug 22, 2022: We've updated this review to Test Bench 1.1, which includes a broad range of new testing procedures to measure stain and water-clearing performance, suction power, crevice-cleaning performance, noise levels, and air filtration performance. We've also updated our debris and pet hair-pickup performance tests as well as our method of scoring user maintenance requirements, recurring costs, dirt compartment sizing, and suitability for the 'Workshop' usage section. Updated Aug 10, 2022: This vacuum's suction force has been retested with a more accurate manometer. The test results for the 'Maximum Suction' and 'Normal Suction' fields have been updated. All relevant scores and text have been updated. Updated Jul 29, 2022: Converted to Test Bench 1.1. Updated Mar 18, 2022: Converted to Test Bench 1.0. Updated Dec 02, 2021: Updated review for accuracy and clarity. Updated Mar 18, 2021: Updated review for accuracy and clarity. Updated Aug 24, 2020: We've updated the power adjustment feature results in the Quality of Life test box. We've also updated the floor settings used on all surface types. Updated Jul 06, 2020: Review published. Updated Jul 06, 2020: Early access published. Sort Category: RATINGS Bare Floor Low-Pile Carpet High-Pile Carpet Pets Stairs Cars Workshop Category All Design Performance Automation The Shark Navigator Lift-Away has okay build quality. It has a mainly plastic construction, though its wand is metal. It doesn't feel especially sturdy overall, particularly its fragile dirt compartment. Thankfully, the vacuum itself is easy to assemble and disassemble since there are clips on each piece, though it can be hard to decouple its canister from its main body. The Shark Navigator Lift-Away vacuum has many parts that need regular cleaning, and not all of them are easy to access. Dirt compartment: You can empty the dirt compartment from the bottom by pressing on the unlock button. It should get regular emptying. You can also open it from the top to access the lint screen, which you should clean regularly. Brushroll: The brushroll can't be removed. That said, you can still get better access to it by using a coin, flathead screwdriver, or anything similar to lift the brushroll cover. While the brushroll is advertised to be self-cleaning, some hair can still get caught in it. Pre-motor filters: The foam and felt pre-motor filters are located underneath the dirt compartment and can be quickly lifted free of their housing. You need to clean them with water every three months. Post-motor (HEPA) filter: You can easily access the HEPA filter by removing the front cover on the vacuum. You should clean it once a year, but in the HEPA filter's product description on their website, it suggests replacing it every six months. The score for this section is based on the recommendations listed within the user manual. Height 45.67" (116.0 cm) Width 12.01" (30.5 cm) Depth 11.93" (30.3 cm) Cord Storing Manual On-Board Tool Storage Yes Vacuum Rack/Station No The Shark Navigator Lift-Away vacuum has decent storage capabilities. It stands up quite well on its own and has onboard storage for its included crevice tool and soft bristle brush attachments. Volume 0.30 gal (1.15 L) Full Indicator Yes Bag Included No Bag Needed The Shark Navigator Lift-Away has a good dirt compartment. It's larger than those of alternatives like the Shark Rotator Lift-Away ADV, and since it's made of clear plastic and has a max fill line, you can tell how close it is to being filled at a glance. Shark Navigator Lift-Away vacuum Vacuum body Dirt compartment Wand Main head with brushroll Hose with handle 1x post-motor HEPA filter 1x foam pre-motor filter 1x felt pre-motor filter User Guide Various tools and brushes Crevice tool Soft bristle brush (attached to crevice tool) Upholstery tool Hard bristle brush (attached to upholstery tool) Cord Length 24.74 ft (7.5 m) Hose Length 3.61 ft (1.10 m) Minimum Wand Length 1.25 ft (0.38 m) Maximum Wand Length 3.35 ft (1.02 m) Total Range 28.08 ft (8.56 m) This vacuum has a disappointing range. Its power cord is decently long, but its hose is considerably shorter than alternatives like the Hoover WindTunnel 2 Whole House Rewind, making it hard to clean hard-to-reach areas when using it in its semi-handheld configuration. Total Weight 13.01 lbs (5.90 kg) Weight In Hand 2.91 lbs (1.32 kg) Carrying handle Yes The Shark Navigator Lift-Away vacuum is decently portable. It's heavy, but thankfully it feels fairly light in your hand. There's a carrying handle that makes it easier to move between rooms. Minimum Battery Life N/A Maximum Battery Life N/A Recharge Time N/A Recharge Dock No Battery Life Indicator No Removable Batteries No Rotating Head Yes Power Adjustment Yes Self-Propelled No Headlights No Easy On/Off Yes Head Surface Type Adjustment None The vacuum has a couple of quality-of-life features. There are two levels of surface type adjustment: "I Hard Floor" and "II Carpet". You can also slightly adjust the suction power with a slider on the handle of the vacuum. Opening the slider lets some air out, decreasing the suction power a bit, which makes it a lot easier to maneuver on carpeted surfaces. Brushroll Yes Brushroll On/Off No Removable Brushroll No Turbo Brush No Crevice Tool Yes Upholstery Tool Yes Soft Bristle Brush Yes Hard Bristle Brush Yes Extension Wand Yes Ceiling Fan Tool No Pet Grooming Tool No This variant of the Shark Navigator vacuum comes with a couple of attachments. There's a combination hard bristle brush/upholstery tool and a combination crevice tool/side-on soft-bristle dusting brush, though be aware that it can be hard to fully remove the dusting brush from the crevice tool. There's also an extension wand to give you more reach. Blower Mode No You can use the Shark Navigator Lift-Away as a semi-handheld vacuum by uncoupling its canister from its floorhead, which allows you to clean with its wand. However, when used as a semi-handheld vacuum, it's still fairly bulky and larger than the BISSELL Adapt Ion Pet in its handheld configuration. Setting Used "I Hard Floor", Suction Control on "Max" Large Debris at 0 gal (0L) 96% Large Debris at 0.07 gal (0.25L) 95% Large Debris at 0.2 gal (0.75L) 93% Large Debris at 0.4 gal (1.5L) N/A Large Debris at 0.8 gal (3L) N/A Large Debris at 1.6 gal (6L) N/A Small Debris at 0 gal (0L) 100% Small Debris at 0.07 gal (0.25L) 100% Small Debris at 0.2 gal (0.75L) 100% Small Debris at 0.4 gal (1.5L) N/A Small Debris at 0.8 gal (3L) N/A Small Debris at 1.6 gal (6L) N/A The Shark Navigator vacuum has superb performance on bare floors. It has no problem clearing small debris like rice or bulkier debris like cereal. Its performance remains consistent as the dirt compartment fills, which is great if you have several large messes to deal with. However, it's worth noting that some small debris can get stuck underneath the floorhead, while its brushroll can scatter a very small amount of debris around. If you're looking for a comparable vacuum with even better performance on this kind of surface, you may want to consider the Shark Rotator Lift-Away ADV, which has a secondary soft brushroll. Setting Used "II Carpet", Suction Control on "Max" Large Debris at 0 gal (0L) 88% Large Debris at 0.07 gal (0.25L) 87% Large Debris at 0.2 gal (0.75L) 84% Large Debris at 0.4 gal (1.5L) N/A Large Debris at 0.8 gal (3L) N/A Large Debris at 1.6 gal (6L) N/A Small Debris at 0 gal (0L) 85% Small Debris at 0.07 gal (0.25L) 86% Small Debris at 0.2 gal (0.75L) 87% Small Debris at 0.4 gal (1.5L) N/A Small Debris at 0.8 gal (3L) N/A Small Debris at 1.6 gal (6L) N/A The Shark Navigator Lift-Away has excellent performance on low-pile carpet. It clears large and fine debris like sand and baking soda without too much trouble. Its performance remains consistent as the dirt compartment fills too. Setting Used "II Carpet", Suction Control on "Max" Large Debris at 0 gal (0L) 74% Large Debris at 0.07 gal (0.25L) 71% Large Debris at 0.2 gal (0.75L) 65% Large Debris at 0.4 gal (1.5L) N/A Large Debris at 0.8 gal (3L) N/A Large Debris at 1.6 gal (6L) N/A Small Debris at 0 gal (0L) 72% Small Debris at 0.07 gal (0.25L) 70% Small Debris at 0.2 gal (0.75L) 67% Small Debris at 0.4 gal (1.5L) N/A Small Debris at 0.8 gal (3L) N/A Small Debris at 1.6 gal (6L) N/A The Shark Navigator Lift-Away has impressive performance on high-pile carpet. It can suck up most fine and large debris like baking soda or sand on this surface type, though you may need to make another pass to clear all of it. Bare Floor 100% Low-Pile Carpet 100% High-Pile Carpet 100% The Shark Navigator Lift-Away does a fantastic job of handling pet hair on a variety of surfaces. It can easily tackle pet hair on bare floors as well as low and high-pile carpet. That said, its brushroll isn't removable, which makes it harder to clear away any tangled hair. Maximum Suction 1.0 inH<sub>2</sub>O (0.25 kPa) Setting Used For Maximum "Switch 2. Carpet", (Brushroll Head) Normal Suction 0.6 inH<sub>2</sub>O (0.16 kPa) Setting Used For Normal "Switch 1. Floor", (Brushroll Head) Hose Diameter 1.3" (3.2 cm) This vacuum has terrible suction power in its floorhead. Its suction inlet is positioned too high above the contact surface to generate a tight seal. If you want to exert the maximum amount of suction force, you should use the vacuum in its semi-handheld configuration with its crevice tool, which generates a maximum of 73.58 inH<sub>2</sub>O (18.31 kPa) of suction, which is more than sufficient for deep cleaning but is ill-suited to cleaning bigger areas. Bare Floor 75.3 dBA Low-Pile Carpet 76.8 dBA The Shark Navigator Lift-Away isn't too loud. It's quieter than most other uprights with more powerful motors, like the Dyson Ball Animal 3 Extra. Still, it's best you vacuum in an enclosed room with the door partially or completely closed if you want to avoid disturbing anybody nearby. The Shark Navigator vacuum has alright maneuverability. Its rotating head makes it easier to navigate between obstacles, but the bulky shape of the vacuum and dirt compartment makes it hard to clean tight spaces or underneath furniture. Its floorhead can also get caught on rug tassels and very dense carpets, forcing you to turn it off to pull it free. Its heavy weight can be a nuisance when lifting it over obstructions like electrical cords. Thankfully, it has an onboard storage slot for its crevice tool/soft bristle brush that places it within easy reach. There's also an upholstery tool, which helps clean furniture. Sofa Pickup Post Test The Shark Navigator Lift-Away does an excellent job of handling pet hair across a wide range of surface types when used with its upholstery tool. While there's no mini turbo brush for better surface agitation, the straight suction attachment is effective in collecting long and short strands of hair on fabric surfaces. The Shark Navigator Lift-Away does a good job of filtering out fine allergens. Its foam and felt pre-motor filters, combined with its HEPA exhaust filter, allow it to capture a good amount of airborne particles. Still, if you're especially sensitive to allergens, it's worth seeking out a bagged vacuum with a HEPA filter, like the Kenmore Intuition Bagged. Wood Cracks Post Test The Shark Navigator Lift-Away does a mediocre job of handling debris on crevices. It lacks the necessary suction force to draw debris out from cracks as it moves, so you'll have to park it in place to clear away debris. If you want better crevice-cleaning performance, you can use its crevice tool. Stain Pickup Post Test The Shark Navigator Lift-Away does a terrible job of removing stains. Even in the '2. Carpet' setting, which boosts suction power and speeds up its brushroll, it has minimal impact on dried-on debris. Water Pickup Post Test Automatic Recharging No Automatic Bag Emptying No Pathing Algorithm Physical Boundary Markers No Scheduled Start Buttons No Cycle Control Buttons No Navigation Control Buttons No App Name No App iOS Availability No Android Availability No Software Boundary Markers (No Go Zones) No App Scheduled Start No App Cycle Control No Navigation Control within App No The Shark Navigator Lift-Away comes in one color variant: 'Blue'. There are a few similar variants with different included parts, which are listed below. We expect all these variants to perform comparably in tests. We tested the Shark Navigator Lift-Away (ZU560C), Model Number Body Color Included Brushes and Tools Notes ZU560 Blue Upholstery tool, crevice tool ZU560C Blue Upholstery tool & hard bristle brush, crevice tool & soft bristle brush Sold in Canada only ZU561 Red Upholstery tool & hard bristle brush, crevice tool & soft bristle brush, wide upholstery tool ZU562 Red Upholstery tool & hard bristle brush, crevice tool & soft bristle brush, mini motor head Note that you can purchase any extra tools on Shark's website. If someone comes across a variant not listed here, let us know in the discussions and we'll update our review. The Shark Navigator Lift-Away is a versatile corded upright vacuum. It has a similar design to newer models like the Shark Rotator Lift-Away ADV, which allow you to uncouple its canister from its body. While it has a less powerful suction motor than most other Shark uprights, its floorhead does offer good surface agitation, resulting in fairly strong debris pickup performance on carpeting. Ultimately, it's a very solid option if you're looking for a relatively affordable upright, and it's a significantly better value than the pricier Shark Navigator Lift-Away Deluxe NV360. If you're looking for alternatives, take a look at our list of recommendations of the best vacuums for hardwood floors, the best multi-surface vacuums, and the best bagless vacuums. The Shark Navigator Lift-Away is better suited for more use cases than the Shark Navigator Lift-Away Deluxe NV360, though the vacuums are similar in terms of design. The Navigator Lift-Away is a little lighter, comes with a wider assortment of tools, can be maneuvered more easily, and delivers superior performance on all surface types. Meanwhile, the NV360 has a marginally longer power cord and vacuum hose. The Shark Navigator Lift-Away and the Shark Rotator Lift-Away ADV have different advantages, and you may prefer one over the other depending on your needs. The Navigator has a bigger dirt compartment, a lighter construction, and superior performance on low and high-pile carpet, especially when cleaning fine debris like baking soda. That said, the Rotator is better-built, easier to maintain, and has a longer power cord and vacuum hose. It also clears more debris on bare floors. The Dyson Ball Animal 2 is better for most uses than the Shark Navigator Lift-Away. Both vacuums perform similarly on bare floors but the Dyson has a better performance on carpet. It's also easier to maneuver, it comes with more tools and brushes, and it has a much better range. However, since the Shark can be used in a handheld configuration, it's better suited for cleaning stairs and cars. The Shark Navigator Lift-Away is better overall than the Shark Rotator Powered Lift-Away Upright. The Navigator has much better performance on bare floors, it's more maneuverable, and it's lighter to hold. That said, the Rotator has a somewhat better performance on low-pile carpet, it has a slightly bigger dirt compartment, and it has a longer range. The Shark Navigator Lift-Away is significantly better than the BISSELL CleanView Swivel Pet. The Shark performs much better on all surface types and it's easier to maneuver. Also, the dirt compartment is bigger, and there are fewer recurring costs. However, the BISSELL comes with a turbo brush. The Shark Navigator Lift-Away is a slightly better performing upright/handheld vacuum than the Shark APEX Upright Vacuum. The Navigator has a much better performance on carpet, and it's lighter to hold in your hand, which makes it better suited for stairs or cleaning cars. It also does a much better job at picking up pet hair on any type of surface. However, the APEX has a better performance on bare floors, a longer range, and a better build quality. The Shark Navigator Lift-Away is better than the BISSELL Pet Hair Eraser Turbo Plus. The Shark incurs virtually no recurring costs, has a larger dirt compartment, and delivers superior performance on all surface types. You can also lift the pod away from its body and use it in a more portable semi-handheld configuration. Conversely, the BISSELL is a little easier to maneuver, with a 'Lift-Away' design that enables you to pick up and carry its canister body independently of its upright portion to clean countertops and shelves with its wand and selection of attachments. Conversely, the BISSELL has a larger dustbin and weighs less. Its floorhead also offers five levels of height adjustment, compared to the Shark's two. The Shark Navigator Lift-Away and Shark APEX UpLight are differently-designed vacuums with different use cases. The Navigator is a bulkier upright vacuum with a larger dirt compartment that does a better job on low and high-pile carpet. Meanwhile, the APEX is a corded stick/handheld vacuum that's much easier to maneuver, better-built, and has fewer parts requiring regular maintenance. It also clears slightly more debris on bare floors. The Miele Dynamic U1 PowerLine and the Shark Navigator Lift-Away have different advantages, so you may prefer one or the other depending on your needs. The Miele has a superior performance on bare floors and carpeted surfaces, and it's significantly better-built. It's also easier to maintain and comes with a few more tools and brushes. That said, the Shark can be used in a handheld configuration and incurs virtually no recurring costs due to its bagless design and reusable filters. The Shark Navigator Lift-Away is much better than the Hoover WindTunnel 2 Whole House Rewind. The Shark has better performance on all surface types, it comes with a soft bristle brush, and it can also be used in a handheld mode. However, the Hoover has a better range, the dirt compartment is a bit bigger, and it comes with a turbo brush. The Shark ION F80 and the Shark Navigator Lift-Away each have different advantages, so you may prefer one over the other based on your needs. The ION has a better performance on bare floors and stairs, while the Navigator is better suited for cleaning carpets. The ION is a cordless stick vacuum, so it has better maneuverability and, as long as there's still battery life left, its range is virtually unlimited. That said the Navigator has a bigger dirt compartment, and it has practically no recurring costs. The Shark Navigator Lift-Away is a better vacuum than the BISSELL Adapt Ion Pet. The Shark has a bigger dirt compartment, more tools, and has a better performance on bare floors as well as low and high-pile carpet. However, the BISSELL can be used as an even smaller handheld vacuum and it's cordless, which some may prefer. It's also easier to maneuver around the room. + Show more
